## **DETAILS**

#### Name

**AKANKSH R** 

Roll Number

3BR23CS006

## **EXPERIMENT**

Title

ANT ON RAIL

**Description** 

There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.

Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left . Your task is to find and return the integer value representing how many times the ant reaches back to original starting position.

Note:

- Assume 1-based indexing
- Assume that the railing extends infinitely on the either sides

#### **Input Format:**

**input1**: An integer value N representing the number of moves made by the ant.

38R23C5006 3BR23C5006 3BR23C5006

input2: An integer array A consisting of the ant's moves towards either side

## Sample Input

5

1 -1 1 -1 1

### **Sample Output**

38R23C50063BR23C50063BK 38R23C50063BR23C-Source Code:

9/28/24, 6:20 AM 3BR23CS006-Ant on Rail

```
def count_returns_to_start(N, A):
    current_position = 0
    return_count = 0

    for move in A:
        current_position == 0:
            return_count += 1

        return_count += 1

    return return_count

# Example usage:
    N = int(input())
A = list(map(int,input()).split())) # Example moves
    result = count_returns_to_start(N, A)
    print(result) # Output: 3

RESULT

5/5 Test Cases Passed | 100 %
```
